Thoroughbred Strawberry and
Raspberry Plants

Henry Emlong & Sons, Stevensville, Mich.

General Instructions

When writing, **PLEASE WRITE YOUR NAME AND ADDRESS PLAINLY.** When ordering, use order sheet and return envelope.

Terms.—Cash must accompany order. If you decide to order early, one-fourth of the price will book your order. The balance must then be remitted before shipment is made. Remit by Chicago, or New York draft, Registered Letter, Postoffice or Express Money Order.

Season of Shipping.—Our shipping season opens about the first of March, and closes the 15th of May. We do not issue a fall catalog. Those desiring plants in the fall may order from this catalog. Fall shipping commences October 1st. Plants in this latitude are fully matured at that date.

Methods of Shipping.—By express.—We guarantee plants to arrive in good growing condition, when shipped by express. The great advantage of shipping plants by express, is the fact that they travel in an open car instead of a closed mail sack.

Parcel Post.—Where plants are to be sent by parcel post, remit at the rate of 20 cents per 100 plants, to cover postage. Add 5 cents for each 100 plants or less and we will see that the package is insured. You then will be sure to get the plants or have your money refunded.

Packing.—Our plants are packed under our personal supervision, this assures you the best that our thirty years' experience can give. We see to it that 26 large, healthy plants are placed in every bunch and that they are correctly and securely labeled. We make no charge for packing. Plants are packed in light wooden crates, and we guarantee them to reach you in good growing condition.

Complaints.—If plants are delayed in transit or arrive in bad condition, notify us **IMMEDIATELY.**

Read Our Guarantee

We guarantee our plants to be strictly pure, true to name and packed to reach you in good growing condition (if shipped by express) or your money refunded. We don't ask you to experiment with worthless varieties, as we list only those varieties which we can guarantee to please you in every way. Our plants are each and every one grown by us, on the very best of soil, they are healthy, heavy rooted and we personally see that you get the very best. This is a very liberal guarantee, you take no chance when you are dealing with us.

Talks on Culture

Soil Preparation.—It has been proven that strawberries will grow and produce great crops of berries on almost any kind of soil. We have found that a rich, loamy soil is best. The strawberry grower should bear in mind that proper soil preparation and care of plants after setting is just as important as the selection of soil. If your soil needs fertilizing, we recommend good stable manure, spread over the ground evenly and plowed under in the fall. We recommend deep, fall plowing as the soil will become firm and will hold the moisture much better than if plowed in the spring. Harrow and disk the soil, in the spring, until it is thoroughly mixed. Roll or float the ground just before setting.

Setting Plants.—When the matted row is desired (we recommend this as the most profitable) the plants should be set 18 inches apart in the row, with the rows four feet apart. This requires about 7,000 plants to the acre. For marking we use a home made, hand marker, marking three rows at a time. The holes are made with a spade, the depth of the holes de-

Order Early.—Although we have an extra large stock of plants, we advise you to place your orders early, it is to your interest to do so, as it assures you of getting just what you want. There is a very large demand for good strawberry plants, and if you delay your order until you are ready to plant we might possibly be sold out of some variety you desire. **ORDER EARLY,** we cannot emphasize this too strongly, and to encourage you to do so we are giving a very liberal premium on all orders received before March 1st.

Substitution.—As some varieties sell much faster than others, it will be a great help to us if we are permitted to substitute one variety for another. If orders received late in season are not marked "**NO SUBSTITUTION**" some variety having same sex and season, will be substituted, if we are unable to supply what you order. We substitute only late in the season.

Inquiries.—If you desire any information pertaining to strawberry or other fruit culture, write us, we will give you our prompt attention. Some people occasionally inquire which varieties are most profitable, much depends on the soil and location. We recommend Early Ozark, and Bederwood for early, Warfield, Pocomoke and Senator Dunlap for medium early, Gibson, Helen Davis and Kellogg Prize for late.

Care of Plants on Arrival.—If your ground is not in shape, or if it is too dry for setting, care for the plants in the following way, dig a shallow trench, take one variety at a time, cut the strings and spread them evenly along the trench, cover their roots with good damp soil, being careful not to get the dirt above the crown.

References.—We refer you to the Union Banking Co., of St. Joseph, Mich., Postmaster, Express Agent, or any business man of Stevensville, Michigan.

pends on the size of the plants. The holes should not be made too large. Take hold of plant just below the crown, put in the hole and press firmly with the feet.

Cultivation.—Plants should be cultivated as soon after setting as possible, as this will hold the moisture and will prevent the soil from baking. Cultivation should continue through the growing season. All blossoms should be removed during the growing season, as this throws more strength in the roots and encourages the plant to make an excellent growth. Set our thoroughbred plants, give them proper care and attention, and your berries will bring you profit.

Mating Plants.—Varieties marked (S) are staminate. Those marked (F) are pistillate. Pistillate varieties must have staminate varieties set every third or fourth row. Staminate varieties will do very well if set in large fields by themselves, but you will find the berries to be much more uniform in size if you mate the staminate varieties with the pistillate. Early pistillates should be set with early staminates and late with late.

Please Note Our Liberal Premium Offers

It is to your interest to order **EARLY**, you will be assured of getting what you want. Send in your orders during **JANUARY** and **FEBRUARY**, and take advantage of our **GREAT PREMIUM OFFERS.**

For every order amounting to \$2.50 and up to \$5.00 received before March 1st, customers may select plants to the amount of 35 cents free.

For every order amounting to \$5.00 and up to \$10.00 received before March 1st, customers may select plants to the amount of 75 cents free.

For every order amounting to \$10.00 or more, received before March 1st, customers may select stock to the amount of \$1.50 free. We cannot allow premiums on "**SPECIAL OFFERS**" or where special price is made on 5000 lots.

Announcement

In presenting this, our catalog and price list, for spring and fall of 1915, we wish to impress upon you that it is our aim and desire to supply our patrons with the very best that our thirty years of successful strawberry culture can produce. We are located in the great fruit belt of Michigan, where the soil and climatic conditions are ideally perfect for the growth of small fruit plants.

Due to our method of continuous cultivation combined with plenty of rain during the past season, we have as fine a stock of healthy, vigorous and heavily rooted plants as can be obtained, regardless of where you get them or what you might pay.

We wish to state right here that you can rely on the description given each variety, as we have tested them and know what they are.

Our business has been built up on the principle that it is better to have one satisfied customer than to have ten dissatisfied customers, therefore we cannot afford to send out inferior stock or make a single promise which we cannot fill.

It is our constant aim to improve the service that we render to our customers. The more business we do the better we can serve you. You are doing yourself a service as well as us when you tell your neighbors about the splendid plants and **Square Deal** you received from us.

Awaiting your favors and wishing you a prosperous season, we remain,

Yours very truly,

HENRY EMLONG & SONS

We Want You to Remember

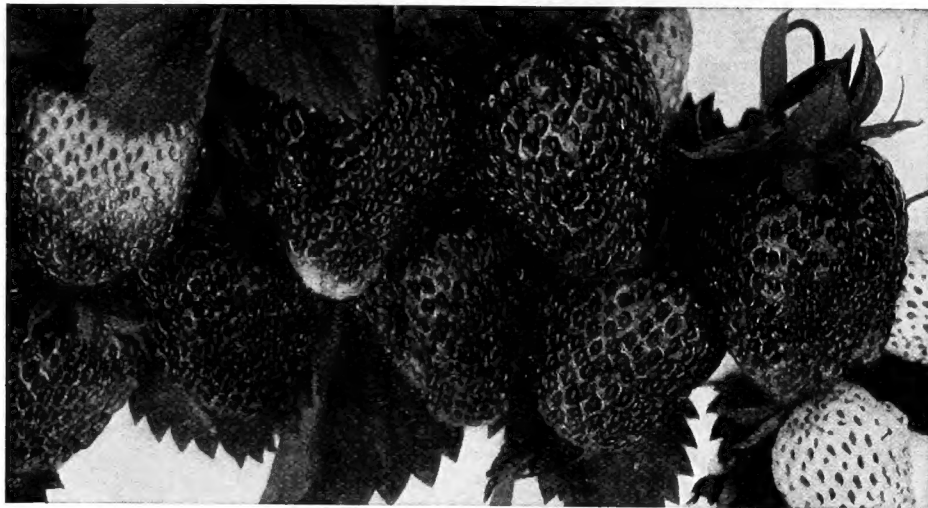

Remember that we have made strawberry growing our business for the past thirty years, and we realize that when you order plants you want those that will bring you the most money. Bearing this fact in mind, we have listed only those varieties which we have tested and can recommend.

Remember that our plants are all grown by us on the best of soil, and, owing to the care and attention given them, they are not the cheapest plants obtainable, but we believe that cheapness is a very poor idea of efficiency.

Remember that our plants are given our personal attention from the time they are set until they are ready for shipment, assuring you the very best that our time and experience can give.

Remember that it is to your interest to order early, as only one-fourth of the price will be required to accompany the order, it will assure you what you want, as all orders are booked in rotation, the first one received will be the first one filled.

Remember that we want you for one of our satisfied customers, give us your order this spring, our plants and **Square Deal** will do the rest.

Bederwood

Strawberry Plants

(For price list of Strawberry and Raspberry Plants, see inside back cover.)

Early Varieties

AUGUST LUTHER (S)—One of the best early varieties grown. It is a very prolific bearer, comes early and continues to bear until practically every berry reaches a good size. The plants are healthy and make a good row. Fruit is very sweet, round in shape, medium large and of very good appearance. August Luther does well in all parts of the country, but like most of the earlier varieties, it does best on rather light soil. We recommend August Luther as a very profitable early variety.

BEDERWOOD (S)—We have fruited this wonderful variety for a number of years. Owing to its great productiveness and good shipping qualities, it is the main berry of 50 per cent of the growers in this locality. The fruit is medium large, conical shape, light red color and of good flavor. Bederwood is a splendid grower, makes a large number of strong runners, it is one of the best plant makers grown, very deep rooted and consequently a very good drouth resister. It is a very strong staminate variety and a very good pollinizer for the earlier pistillates, such as Warfield, Haverland, etc. We cannot say too much for the Bederwood, we have found it unexcelled as an early berry. We have never known Bederwood to fail.

CHARLES I. (S)—A new early berry of great promise. We are sure you will be well pleased with this new variety. We have found it to be an excellent berry in every way. A good plant maker, and the plants are large and healthy. Foliage is dark green and of the spreading habit. The fruit is uniform in size and shape

and of good quality. Charles I. is very productive and fruit is easily picked.

EARLY OZARK (S)—We recommend this as the very best early variety in existence. This extra early variety was introduced in Missouri, it is one of the newer varieties, but is commanding great praise wherever it has been grown. Growers who desire something fine and extra early, should order Early Ozark. The plants are strong, healthy and very deep-rooted, and will withstand a great amount of dry weather. Fruit is large, good flavor and good color. Its growing popularity is due to its great productiveness and its good shipping qualities. We have a large stock of Early Ozark, but advise you to order early.

EARLY RED BIRD (S)—This is the earliest variety we have ever grown. Early Red Bird is a wonderful plant maker, is much more productive than Michel's Early and ripens several days earlier. The fruit is medium large, fine flavor and quite firm. If your market calls for a good early berry or if you want the distinction of having the first short cake in your neighborhood we advise you to order Early Red Bird.

MICHEL'S EARLY (S)—One of the older extra early varieties. And owing to its good shipping qualities, for an early berry is still in great demand. The plant makes a very robust growth, they are very strong and healthy, although quite small. Fruit is of medium size, delicious flavor; a very heavy bearer. We recommend Early Ozark as a better variety but many growers plant Michel's Early and make money with them.

Medium Early Varieties

CLYDE (S)—A very popular variety in every fruit district of the United States. It is a very strong staminate variety and is very valuable as a pollenizer for the medium early pistillate varieties. The foliage is dark green and of a spreading habit, like other late varieties it does best on rather heavy soil. This variety is very productive, the fruit is large, irregular in shape and quite firm. Plants are strong, robust and very healthy, producing a very heavy root system, making it an excellent drouth resister.

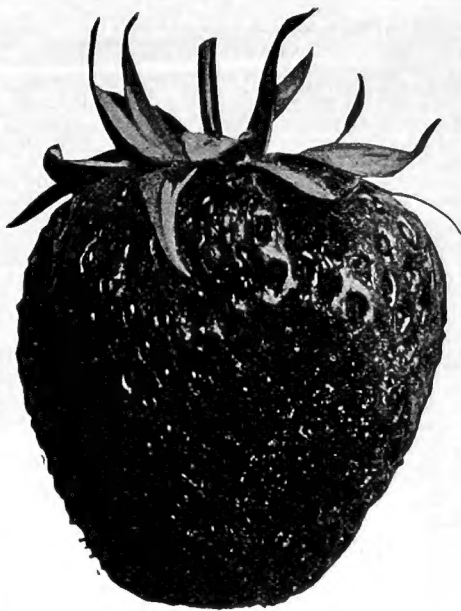

CORSICAN (S)—A very beautiful and profitable variety. A strong robust grower and an excellent drouth resister. This variety is universally popular as it has a number of good qualities. The fruit is in the fancy class, it is very large, delicious and very attractive. A very productive variety and one that can be shipped a great distance, as it is very firm.

ENHANCE (S)—A very popular variety over a large section of the United States. The fruit is very large, firm, and of excellent quality. It is an abundant plant maker, the plants are strong and very deep-rooted. Enhance will give you good returns if given proper care and attention.

GLEN MARY (S)—A very fancy berry of fine flavor, a good shipper and universally popular as it does well in all parts of the country. Glen Mary is a good plant maker, producing fine, large, sturdy plants, very deep-rooted. The foliage is dark green and grows upright, giving the fruit plenty of shade. The fruit is large, choice and very handsome. It is considered one of the most profitable varieties. Glen Mary will please you and bring you handsome profits. There is a large demand for Glen Mary, and we have a fine stock, we advise you to order early.

HAVERLAND (P)—This is one of the old varieties that has always been grown extensively throughout the country. The plants are healthy, large and vigorous, extremely productive and a good money maker. Haverland makes a good sized fruiting row and matures an immense amount of fruit, which is very easily picked, as it is plainly in sight. It is very deep-rooted, and withstands a drouth much better than most varieties. The fruit is large, firm and very fine looking. Haverland is very popular and we advise you to include them in your order.

KLONDIKE (S)—A very popular variety, originated in the South. It is proving so satisfac-

Early Ozark

tory in all parts of the country, that it is grown quite extensively in some of the Northern states. The plants make a fine growth and are very strong and healthy. The berries are of good size, uniform in shape and very attractive. They will bring the top price on all markets.

SENATOR DUNLAP (S)—This wonderful variety is popular in every section of the United States, and it is so well known that it seems unnecessary for us to give it a detailed description. We recommend Senator Dunlap as the best medium early

berry of the Warfield type, hardy, very productive, fine keeper and very attractive. It is one of the finest for canning, as it makes a rich dark red syrup. The fruit is evenly shaped and is quoted at the best price on all markets, as it is a very beautiful berry and holds its brightness long after being picked. We cannot recommend Senator Dunlap too highly, we guarantee it to please you in every way. The best recommendation that Senator Dunlap is a great berry lies in the fact that it is in greater demand every year. We have an extra fine stock of Senator Dunlap but owing to the great demand for this wonderful variety, we advise you to place your orders early.

Senator Dunlap

MEDIUM EARLY VARIETIES—**Continued.**

LADY THOMPSON (S)—This is another variety well liked and grown quite extensively in the South. The foliage is exceedingly vigorous and leathery, which enables it to resist fungus and drouth. Lady Thompson is very productive, fruit medium large, firm and good quality.

WARFIELD (P)—A truly wonderful variety. Warfield has been the leader for years, its only rival is the Senator Dunlap. We advise you to set these two great varieties, they will bring you splendid returns. The Warfield is a great plant maker and the plants are robust, strong and healthy. The fruit is dark red, uniform in size and shape, very sweet and delicious. This variety is extremely productive, the berries are firm and of exceptionally fine appearance. If you desire something fine for canning, try Warfield, you will not be disappointed. Warfield has a long fruiting season, and is a money maker. We advise you to order generously of Warfield, as it is a good berry for main crop, both for home use and market.

**Aroma****Late Varieties**

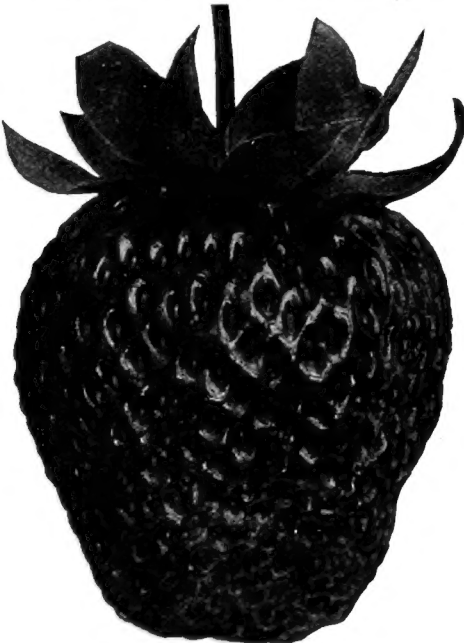

AROMA (S)—A universally popular variety, and one that has been grown with great success in every fruit district of the United States. Aroma is very prolific, producing great quantities of very attractive fruit. With the exception of Kellogg's Prize we believe the Aroma to be the most

profitable late variety in existence. The plants are very strong and healthy and send out an abundance of runners. Fruit is very large, conical in shape and of fine quality. You can make money with Aroma, and we advise you to order early as there is always a large demand for this variety.

BUBACH (P)—A very fancy and profitable variety if you have a nearby market calling for a fancy berry. It is a rather slow plant maker, but the plants are strong and healthy, they make a robust growth and are very fine looking. The fruit is large and handsome, bright red, conical shape and a good seller. There is a large demand for Bubach and if you want a good money maker, we advise you to order this variety, as it is very popular in all parts of the country.

BRANDYWINE (S)—This is one of the old varieties and due to its great productiveness, large size and attractiveness, continues to be very popular in all parts of the country. The berries are crimson, very firm and excellent quality. This variety has an extra long fruiting season and the berries hold their size to the last. The plants are exceptionally strong and productive, its foliage is large, clean and healthy. A fine berry and one that will prove very beneficial as a pollinizer to your late pistillate varieties.

BUSTER (P)—This is one of the new varieties and a good one, as its name suggests. The plants are strong, sturdy growers and make a good row. Fruit is extra large, fine flavor and excellent color. If you want something fine for your extra late market we advise you to order Buster.

**Gibson**

Norwood

GANDY (S)—One of the leaders among the late varieties. The best proof that it is a good one lies in the fact that it has been grown extensively for a number of years, and still is in great demand. The Gandy is a great favorite with us, it does not yield as heavy as some, but the fruit is very large, firm and a good shipper. It is one of the latest varieties and is very showy. It is quoted at the highest price on all markets. The plants are very large, vigorous, healthy and strong growers.

GIBSON (S)—An exceedingly fine new variety, has an extra long fruiting season and the berries hold their size well. We advise every grower to order Gibson. The plants make an extra fine growth, rooting deep, producing a large amount of foliage, giving the fruit ample protection from the sun. The vines are loaded with beautiful dark red berries, fine flavor, extra large and firm. It is an excellent shipper, as it is firm and very attractive and commands the top prices. Gibson is commanding great praise everywhere. We guarantee this variety to please you in every way. Don't fail to order Gibson. We guarantee them, and we ask you to place your orders early, as they are in great demand.

HELEN DAVIS (S)—This variety stands unexcelled as a drouth resister, as it is one of the hardiest varieties in existence. It is universally popular, as it seems to be adapted to every kind of soil and weather conditions. We heartily recommend this variety and we guarantee it to please you as it has thousands of others. It is truly a wonderful variety as it begins to yield with the medium early varieties and continues to bear after some of the latest are gone. Helen Davis produces an enormous amount of large, beautiful berries, you will hardly understand how the plants can thrive under such loads of fruit. The

fruit is very attractive, as it is very large, has a fine color and is very delicious. It is a fine shipper and commands fancy prices. The plants are very sturdy and healthy and make an excellent growth. If you wish to swell your profits we advise you to get a good number of Helen Davis. We have a large stock of them, but as they are in great demand we advise you to order early.

JOE CRAMPTON (S)—This profitable new variety is gaining universal praise, due to its immense size and attractive qualities. The plants are extra large, strong and healthy. Fruit is extra large, beautiful color, fine flavor a fine shipper, as it is firm and holds its attractiveness long after picking. Include a few Crampton in your order, you will have berries that will surprise you.

KELLOGG'S PRIZE (P)—We recommend this as the best variety we have ever grown. It is impossible for us to give this wonderful berry an accurate description in this limited space. We want every one of you to order this variety, we guarantee satisfaction, if given proper care. The best recommendation we can give it is as follows: It is the best variety we have tested in our thirty years' experience. We have tested nearly 100 different varieties, but have found none to equal Kellogg's Prize. As a commercial berry it is unexcelled, it has all of the following great qualities combined, beauty, size, color firmness, hardness and adaptability to all soils and climates. The plants are very hardy throw out plenty of runners and make a good row. The berries are the finest we have ever seen, extra large, fine color and very attractive. Include Kellogg's Prize in your order this spring, they will prove every one of the above statements.

Gandy

Half natural size.

Pocomoke

of very attractive fruit, always commanding high prices. It has a long fruiting season and the berries are large to the last. The plants are exceptionally strong and healthy, its foliage is large, clean and healthy. The fruit is of fine quality, and is quite firm and attractive. This variety is coming to the front, and we advise you to try them out.

STEVENS' LATE CHAMPION (S)—This is another new extra late variety with a fine future, as it is very attractive and an excellent shipper. It is later than the Gandy and has a longer fruiting season than this old variety, making it a very profitable variety where extra late berries are in demand. The foliage is dark green, and the plants are large and healthy. Berries are large and occasionally slightly creased and are very firm and bright red in color. Stevens' Late Champion is a profitable berry and you should give it a trial.

UNCLE JIM (or Dornan) (S)—This berry is in a class by itself. One of the largest berries grown and a good yielder. The plants are extra large, strong, healthy and root deeply. Season is late and it does best on heavy soil. If you want something fancy to show your friends, we advise you to order Uncle Jim. It is a profitable variety, attractive on the market.

WM. BELT (S)—This is one of the old varieties, and one that is still growing in popularity. This variety does best on heavy, moist soil, and is very profitable as a pollinizer for the late pistillate varieties. A very sturdy grower and a good plant maker, the plants are large, deep rooted and very healthy. The fruit is of the very finest flavor, beautiful color and very firm. For canning it is unexcelled, its rich red color heightened by the effect of its prominent yellow seeds makes it very attractive. This variety needs no petting and will produce a wonderful crop of fruit regularly. The berry is very large, conical, and uniform in shape. We advise you to include Wm. Belt in your order.

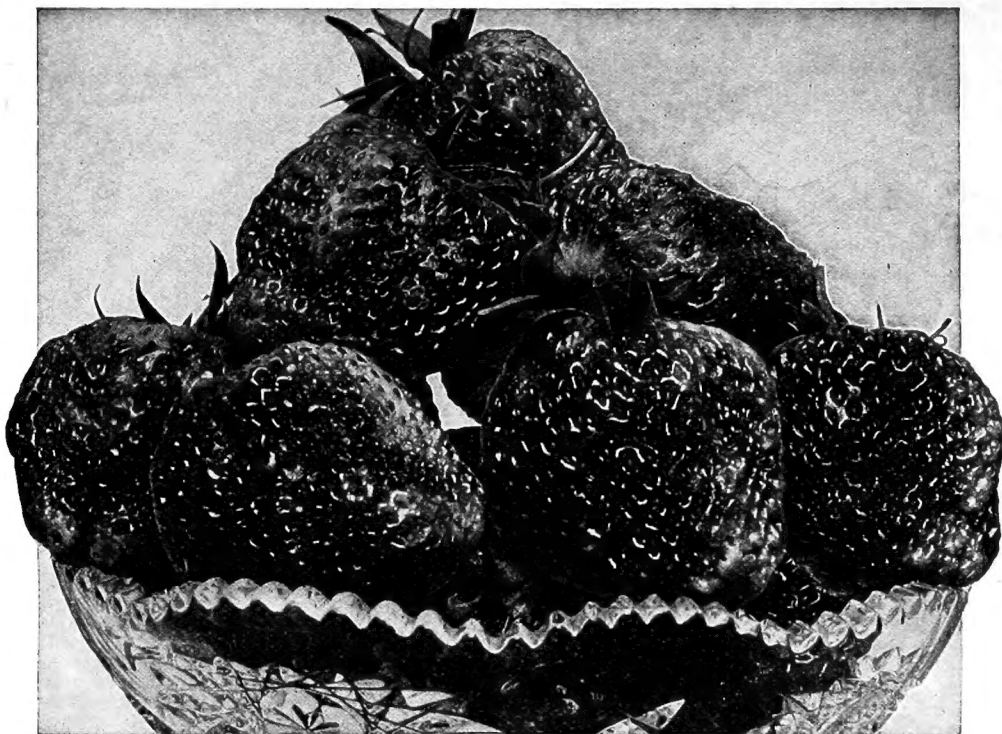

LATE VARIETIES—Continued.

NORWOOD (S)—Norwood owes its great popularity to its great attractiveness, fine color and immense size. It is a wonderful variety, producing some of the largest berries we have ever seen. It is rather a slow plant maker, the plants are vigorous, large and strong. Berries are bright red, firm and good shippers, as they hold their beauty long after picking. Norwood has a long fruiting season and the berries hold their size well. Order Norwood, they are fancy and profitable.

POCOMOKE (S)—A truly wonderful berry in every respect. You will not be disappointed with this great variety. It is heartily recommended by all who have grown it. Here are some of its qualifications. Great productiveness, very attractive, delicious flavor, very firm, rich dark red color, and adaptability to all soils. The plant is a very strong, robust grower, strong and healthy, it roots deeply, making it a desirable variety where there is not ample rainfall. The fruit ripens evenly and is an excellent shipper, as it is firm and holds its attractiveness long after picking. Order Pocomoke and Gibson, you will be well pleased with these two varieties.

PAN AMERICAN (S)—This is a new variety and, judging from the showing it made on our farms last season, it is one of the best. In appearance it is similar to the Norwood, but it is much more productive. This alone should be enough to assure you that it is a good one. It is a good plant maker and the plants are large, strong and healthy. The fruit is large, dark red and evenly shaped. This variety is an excellent shipper and one of the most attractive berries grown. We want you to order a few Pan American, just to give them a trial.

SAMPLE (P)—One of the latest varieties grown, and one that is becoming universally popular. This is a fine berry, one that has no bad points for criticism. It is a very prolific yielder

Superb

Fall Bearing Strawberry Plants

These are the wonderful berries you have read so much about. We do not recommend them very highly as a commercial berry, as they are hardly firm enough to ship a very great distance. To attain the best results from the fall-bearing varieties, your ground should be rich and well prepared, remove the blossoms from all new set-strawberries, especially the fall-bearing varieties, and do not allow them to bear regular crop in June. The fall bearers we are listing are quite productive, good size and flavor. Every family should have some of these wonderful berries in their garden. 200 plants will produce all the berries a large family can use during the months of August, September, October and part of November.

We have no doubt but that within a few years the development of fall-bearing strawberries will bring us varieties which will be marvelous money-makers for the fruit grower.

The possibilities of this new species are apparently unlimited. Given a good rich soil, thorough cultivation and a careful thinning out, there is no pause in the production of ripe fruit from June till November. You should at least have the pleasure of a home garden patch of these wonderful new berries.

SUPERB (S)—This is the best and most advertised fall-bearing variety in existence. Fruit is very large, rich, dark red color, and very attractive. The plants are large, strong and healthy. Superb is a good bearer and will please you.

AMERICUS (S)—Another good fall-bearing variety that is becoming universally popular. A good plant maker and very productive. Fruit is large, good color and very attractive.

PROGRESSIVE (S)—A very prolific bloomer and a heavy yielder. A good plant maker and the plants are strong and healthy, foliage is light green and plenty of it. Fruit is large, fine flavor and good quality. Although the Superb is more extensively advertised, we believe that the Progressive is a better berry in some respects.

Red Raspberries

Thoroughbred Strawberry plants is our specialty, but for the benefit of our customers wishing to grow red raspberries, we have grown an extra fine, large stock of red raspberry plants. Our cane plants are just as thrifty as our strawberry plants and will make an excellent growth. You can make money growing red raspberries, and they are fine for table use and canning. We plant red raspberries three feet apart in the row with the rows seven feet apart. This requires about 2,400 plants to the acre.

MILLER—We recommend this as the best early raspberry, as it is a splendid shipper and will hang on the bushes several days after ripening. Its shipping qualities are perfect, and it makes an excellent growth of sturdy canes. We have grown Miller for a number of years and can heartily recommend it as an early variety.

CUTHBERT—This is the leading late market variety, and we recommend it as the most profitable red raspberry you can grow. The canes are extra large, strong and healthy. The fruit is of excellent quality, fine flavor, firm and a good shipper. Cuthbert commands the very top price on all markets, as it is very attractive and a fine keeper. To get the best results from the Cuthbert, all plants growing between the hills should be cut off. Your fruit will be of much better quality if you follow this method of culture. Leave only five or six canes to the hill and you will have an enormous bush that will yield a fine crop of excellent fruit. Order Cuthbert, you will not be disappointed.

EARLY KING—This popular variety is gaining friends in nearly every locality. It is not as sturdy a grower as the Cuthbert, therefore it does best on good, rich,

Cuthbert

heavy soil. If you have a good market for medium early, fancy red raspberries, we advise you to set Early King. Raspberries are bringing high prices now, and a berry as attractive as the King, will bring you a fine price. Early King is a money maker, the fruit is bright red, fine flavor, very firm, nearly round in shape and very easily picked. Early King produces an immense amount of fruit and it ripens very fast, some growers in this locality pick their Early Kings every day. It is unnatural for the King to grow in bush form, therefore you should leave all plants which shoot up between the hills. If you have a good market, you can clear more money from an acre of red raspberries than any other kind of fruit. We advise you to try a few hundred.

THOMPSON—This is the earliest red raspberry. A very profitable variety, as it comes early and commands the best prices. Berries are medium large, fine flavor and a good shipper. We recommend this variety to those who have a good market for early red raspberries.

Special Offer—Family Fruit Garden

Every family should have a fruit garden. You will find it to be the most valuable piece of ground you have. It will provide you with fresh berries every day during the summer, enough for canning for winter use, and you will sell more than enough berries to pay for the work and the ground.

If you desire plants in large quantities, write us what you want; it will be to your interest, as we can give special prices on large orders.

CERTIFICATE OF NURSERY INSPECTION. No. 1520.

THIS IS TO CERTIFY, that I have examined the nursery stock of Henry Emlong & Sons, and find it apparently free from dangerous insects and dangerously contagious tree and plant diseases.

This certificate to be void after July 31, 1915.

L. R. TAFT,

Agricultural College, Mich., Dec. 4, 1914.

State Inspector of Nurseries and Orchards.

The Popular
Helen Davis
(See Description on Page 2)

Lake View Strawberry Farms

Growers of

**Thoroughbred Strawberry and
Raspberry Plants**

Henry Emlong & Sons, Stevensville, Mich.
